

Server Monitoring

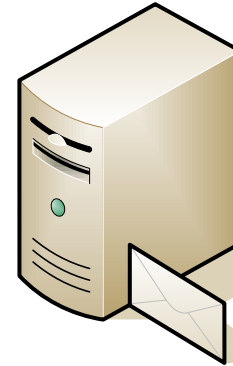

Agent is Installed

The Server is then scanned to see what ports, processes, and services are currently in use

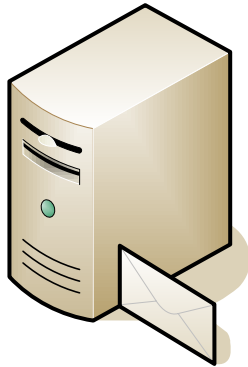

Based on the results of the scan the default monitoring policies are applied

Application:
Microsoft Exchange Directory
Microsoft Exchange Event Service
Microsoft Exchange IMAP4
Microsoft Exchange Information Store
Microsoft Exchange Internet Mail Service
Microsoft Exchange Management
Microsoft Exchange Message Transfer Agent
Microsoft Exchange Routing Engine
Microsoft Exchange Site Replication Service
Microsoft Exchange System Attendant

Performance:
CPU, Memory, Logical Disk, Paging File

24X7 monitoring of all applications and performance parameters

In the event of an application failure or performance issue the Network Operations Center is immediately notified and remotely resolves the issue.
